

Relocation, Rollout & IT Asset Disposal

Dispose your IT Assets without putting your organisation at risk. Computergate IT Disposal provides safe, secure & accredited disposal of redundant IT equipment for any organization.

Asset Disposal Services

The Computergate Disposal team works closely with each client to remove any unwanted equipment and ensure safe disposal. We provide on site data removal of hard drives or can transport the equipment off site for secure removal and disposal at one of our service centres. We adhere to relevant waste disposal directives and ensure the least environmental impact. On completion, an official certificate of disposal is issued, including proof of the disposal of non-hazardous waste, such as cables, metals and battery acids.

De-Rack Equipment & Removal

Our qualified technicians are able to De-Rack nominated equipment and transport to a secure environment for data removal, disposal or destruction. We can assist in ensuring that the right equipment is powered off, disconnected, safely isolated and removed from the infrastructure.

Secure Data Removal

Our destruction service includes the removal of data from all Optical discs, Hard drives & Tape media that contains sensitive data. We use a custom built degaussing process that performs certified data removal. A full report and destruction certificate of the data removal outcomes are provided upon completion. This includes photographic evidence and specific details of the drive such as the serial number, the size and the overall condition.

This process is performed off site, in a controlled environment at one of our service centres.

Environmentally Friendly Disposal

Computergate IT Asset Disposal prioritises the environment, and the impact I.T has on it. Materials such as batteries can have long term ramifications to the environment. We ensure the disposal process has the lowest possible impact to the environment, using recycling and responsible disposal services.
